

How to search for other Users / Members

If you are logged in, you can [search for other users](#) by their username from the [Advanced search](#) page. Additionally, the user pages offer a way to search for other users with the same research interests.

Complete your **Research Interests** in [Professional Information](#) with a few relevant keywords or -phrases as shown below.

Research Interests:

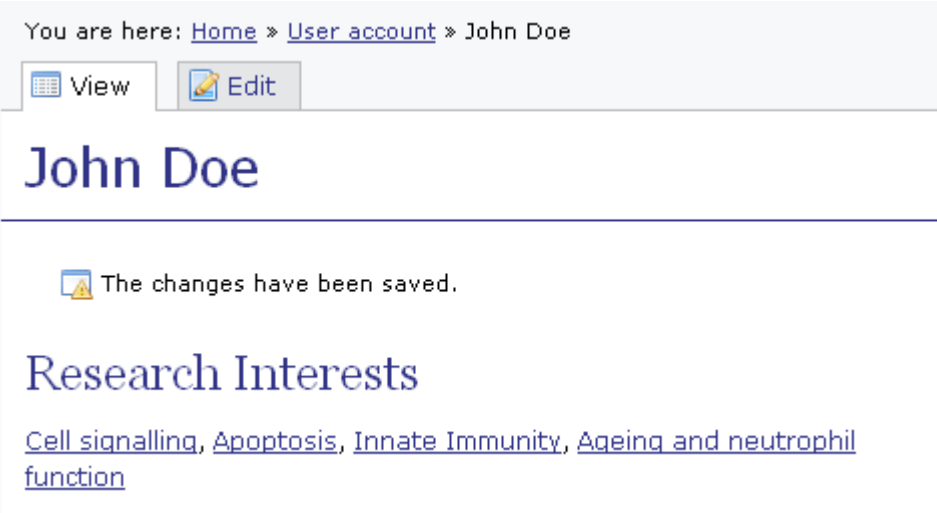

Cell signalling, Apoptosis, Innate
Immunity, Ageing and neutrophil function

Put each item on a separate line or separate them by commas. No HTML allowed.

 Do not display Research Interests publicly

You can separate your keywords by commas or by a new line (Innate Immunity is regarded as one key-phrase in this case). Make sure that the checkbox below is not selected. Once you save the changes you will see the **Research Interests** appear as links on your user page.

These links lead to lists of other registered users with exactly the same research interest.

You are here: [Home](#) » [User account](#) » John Doe

Additionally, BSRA members have access to a **BSRA member search facility** (only BSRA members are included in this database). A link to the Membership database is displayed in the top box on the left hand side. This enables BSRA members to search for other members by Surname and/or Research Interests. Further search options may be added in the future.
